Research Profile:

Physician and field epidemiologist with experience in clinical trials, public health surveillance, primary care, and digital health systems in Bangladesh. Currently pursuing a Master's in Health Informatics at Karolinska Institutet under the Swedish Institute Scholarship.

My research focuses on:

- Health information systems, standardization and interoperability
- Implementation of digital health in public health systems
- Epidemiological surveillance and predictive analysis using informatics
- Digital health systems in low- and middle-income countries
- Tele-healthcare and innovative interventions to reduce inequality
- Optimization of health information system for Data-driven health policy

Experienced in:

- Clinical trials
- Digital Health Information System
- Health data analysis
- Disease surveillance
- Public health program evaluation.

Research Interests

- Health information system architecture, standardization and interoperability
- Clinical Decision Support System
- Tele-healthcare and Digital health systems in low- and middle-income countries
- Epidemiological surveillance using digital platforms
- AI and data analytics in public health
- Implementation science in health systems
- Digitalization of primary care

Education and Academic Training:

M.Sc. in Health Informatics 2025 – 2027
Karolinska Institutet & Stockholm University, Stockholm, Sweden

Relevant coursework:
- Health information systems, Information security in healthcare and Health Data Analysis
- User Needs, Requirement Engineering and System Development in Health Informatics
- Research Methods and Health data analytics in Informatics
- Standardization, Interoperability and Clinical decision support systems

Fellowship Training: Intermediate Field Epidemiology Training *(iFETP)* 2022 – 2023
Institute of Epidemiology Disease Control and Research, Dhaka, Bangladesh
Relevant coursework:
- Applied Epidemiological methods in Emergency Public Health Response
- Public Health Surveillance, Health Program Evaluation, Emergency Public Health Communication

Professional Medical Training: Bachelor of Medicine and Surgery (MBBS) 2010 – 2015
Rangpur Medical College, University of Rajshahi, Bangladesh
Relevant coursework:
- Clinical Medicine, Surgery and Basic Medical Sciences
- Gynecology, Obstetrics, and Child healthcare
- Public Health Sciences focusing Community Medicine

Research Experience:

Clinical Trial Research Physician of JiVitA Project **at** Johns Hopkins University 2017-2018
Project: *Multiple Micronutrient Supplementations in Pregnancy*
Responsibilities:
- Field trial supervision
- Birth defect monitoring
- Training and supervision of phlebotomist and clinical laboratory technician for field lab operation.

Research Associate in Randomized Controlled Trial – Iron Fortified Lentil Trial at BRAC & University of Saskatchewan 2018-2019
Project: Consumption of Iron Fortified Lentil for anemia prevention among adolescents
Responsibilities:
- Implementation and Execution of trial activities.
- Tracking trial progress, reporting field activities and data management
- Data quality monitoring and statistical reporting
- Supervising the field laboratory operation including collection, transportation and storage of Biological Samples.

Clinical Research Physician of Non-Communicable Disease Surveillance at BRAC James P Grant School of Public Health, Dhaka, Bangladesh 2019-2020
Project: **Non-Communicable Disease Surveillance and South Asian Bio-Bank**
Responsibilities:

- Managing Surveillance site, Leading the Field-operation of surveillance data collection, management and storage.
- Supervising the field laboratory operation including collection, transportation and storage of Biological Samples.

Professional Experience

Medical Officer – Ministry of Health Bangladesh 2020 – 2025
Key contributions:

- Supervised district health database and surveillance systems
- Managed DHIS-2 health data reporting and Health Information System at national level
- Conducted outbreak investigations in regional infection outbreak and established disease surveillance system using digital platform and local resources.
- Coordinated COVID-19 laboratory data management, report pipelining and analysis at national level.
- Contributed in launching mental healthcare program in primary care setting in assistance with WHO's mh-GAP action program.

Technical Skills

Health Informatics:

- Architecture: Requirement Engineering, System Design, UML Modeling, Mobile Health Applications, CLIPS- rule based production system.
- Standardization and Interoperability: OpenEHR, HL-7 FHIR, SNOMED CT, DHIS-2
- Clinical Applications: Clinical Decision Support System (CDS) tools, Telemedicine

- Data Analysis: SPSS, R, Python, EpiInfo
- Data visualization: GIS: QGIS
- Programming: Python (pandas, numpy)

Teaching & Capacity Building:

- Mentored Field Epidemiology Training Program fellows for their fellowship projects on Disease Surveillance, Outbreak Investigations and Evaluation of Public Health Program
- Conducted training on disease surveillance for the Medical Doctors, Nurses and Statisticians working in the secondary care hospitals in Bangladesh.
- Developed training modules for epidemiology workforce in District Disease Surveillance Unit in Bangladesh.

Grants and Scholarships

- **Swedish Institute Scholarship for Global Professionals** 2025–2027
  Government of Sweden
- **Prime Minister's Award** 2024
  Prime Minister's Office, Government of Bangladesh

Leadership & Voluntary Service

- Cohort Representative – Field Epidemiology Training Program
- National Delegate – WHO Mental Health Workforce Training
- Secretary – SANDHANI National Eye Donation Society

Certifications

- Certified Field Epidemiologist – US CDC / EMPHNET
- International Mental Health Workforce Training – WHO

Languages

- Bengali- Native
- English- Professional proficiency
- Swedish- Basic (A1)
